

CS 499: Milestone IV, Planned Code Enhancement

Robert M Cloer

Southern New Hampshire University

For this part of the milestone I'll focus on the bid and sort cpp that I previously used in the last milestone. The bid and sort program was created to keep track of bids and companies in my IT145 class.

This database shows my skillsets of creating different aspects of databases, hash tables, vector sorting, and binary search trees. This also is a complete program and I was given excellent remarks on its creation and implementation.

Upon reviewing the database and code for the creation I do not have any updates or changes that I would make.

When I was creating it, it was kind of a daunting task. I didn't truly understand how to fully implement a database and all of the background that goes into it.
